## Transport secretary announces £2bn for active travel - RAC reaction

**Responding to this afternoon's announcement, RAC head of roads policy Nicholas Lyes said:**

“We welcome the Government’s approach to increasing safe cycling and active travel for people to get about, particularly as concerns about the safety of using public transport are likely to persist for some time.

“The success of new walking and cycling schemes will depend on how attitudes to using cars for short journeys have changed over recent weeks,

and if those attitudes translate into people permanently switching to active forms of personal transport. It's very likely that while traffic volumes are currently down, people will inevitably return to the comfort and convenience of their vehicles for some journeys when lockdown restrictions are eased, especially where they need to cover longer distances or have a longer commute. The needs of all road users must therefore be carefully considered. For example, authorities will need to be careful about reducing road space in certain areas as they could end up creating problems if traffic demand outweighs those opting to use a bike.

“The additional funding allocated for electric vehicle charging infrastructure is much needed. While the proportion of drivers looking at purchasing an electric vehicle as their next car choice remains relatively low, interest is increasing. Charging infrastructure in the UK has improved significantly, though drivers still say this remains a barrier to them choosing an electric vehicle, alongside range and comparable cost to a similarly sized conventional vehicle.

“While drivers are lukewarm about the idea of having e-scooters on roads, they also often tell us they would like to have cheap, reliable alternative forms of transport so the Government is right to look at different ways for us to get around in congested cities. E-scooters could provide that alternative for short trips, though their safe use must always be the number-one priority. For example, it makes sense that these devices have safety features like reflectors and speed limiters fitted, and that options such as insurance and training are carefully looked at to see if they can bring additional safety benefits. The Department for Transport might also need to look at changes to the Highway Code to accommodate new forms of road transport.”

“The Transport Secretary said the car will continue to play a vital role and we also await further detail on his pledge to look at investing in wider road infrastructure, including using this period of lower traffic volumes to fix potholes on our local roads.”

## About the RAC

The RAC, an iconic UK brand, provides complete peace of mind to nearly 14 million UK private and business drivers, whatever their motoring needs. As well as its premium nationwide breakdown assistance service – with an expert branded patrol workforce attending more than two million breakdowns every year – it offers a wide range of market-leading products across insurance, legal services, vehicle inspections and service, maintenance and repair. Included in this is the first-of-its-kind nationwide Mobile Mechanics service which brings the garage to homes and workplaces.

At the forefront of new solutions for business fleets and consumers, the RAC's breakdown service is electric-ready with mobile EV charging technology and can be called on using [myRAC](#) – the all-in-one route planner, fuel finder and breakdown reporting app.
